# Environmental Data Program

## Next-level transparency for better-informed product choices

The Environmental Data Program is a framework for how we measure, categorize, and compare the environmental attributes and footprint of our products.

Using a rigorous, fact-based methodology, the program provides environmental data from across the product lifecycle.

Five data categories across the product lifecycle

**Use Better:** How sustainable a product is, including environmental footprint, materials and substances, packaging, and energy efficiency.

**Use Longer:** How a product's life time can be effectively extended in terms of reparability and updatability.

**Use Again:** How a product can be reused, from dismantling and remanufacturing to recyclability and manufacturer take back.

With this transparent, verified data, customers and partners are empowered to make conscious environmental choices and accurately evaluate and report on sustainability performance.

All our hardware offers have an associated environmental data available on [se.com](http://se.com) product pages.

# Product Selector

# Environmental Data Program

## Next-level transparency for better-informed product choices

The Environmental Data Program is a framework for how we measure, categorize, and compare the environmental attributes and footprint of our products.

Using a rigorous, fact-based methodology, the program provides environmental data from across the product lifecycle.

Five data categories across the product lifecycle

**Use Better:** How sustainable a product is, including environmental footprint, materials and substances, packaging, and energy efficiency.

**Use Longer:** How a product's life time can be effectively extended in terms of reparability and updatability.

**Use Again:** How a product can be reused, from dismantling and remanufacturing to recyclability and manufacturer take back.

With this transparent, verified data, customers and partners are empowered to make conscious environmental choices and accurately evaluate and report on sustainability performance.

All our hardware offers have an associated environmental data available on se.com product pages.

# Environmental Data Program

## Next-level transparency for better-informed product choices

The Environmental Data Program is a framework for how we measure, categorize, and compare the environmental attributes and footprint of our products.

Using a rigorous, fact-based methodology, the program provides environmental data from across the product lifecycle.

Five data categories across the product lifecycle

**Use Better:** How sustainable a product is, including environmental footprint, materials and substances, packaging, and energy efficiency.

**Use Longer:** How a product's life time can be effectively extended in terms of reparability and updatability.

**Use Again:** How a product can be reused, from dismantling and remanufacturing to recyclability and manufacturer take back.

With this transparent, verified data, customers and partners are empowered to make conscious environmental choices and accurately evaluate and report on sustainability performance.

All our hardware offers have an associated environmental data available on se.com product pages.

**ELECTRA Metal Clad Plugs & Sockets are specially designed incorporating the latest safety, quality and user friendly features.**

**Construction**

- The casting is made from non-corroding die-cast aluminum alloy combining exceptional compactness with high strength
- The design/construction eliminates the possibility of mismatch in fitting of plugs in corresponding sockets
- The floating contacts in the sockets are self aligning and facilitates smooth plugging in without undue pressure (These can be easily removed for wiring )
- A provision for pilot pin facilitates mechanical interlocking in case of 63A ratings

**Human Safety**

Specially designed shroud to avoid accidental finger contact with plug-pins while inserting/removing the plug  
Similarly, the contact tubes in sockets are deeply recessed to avoid human contact

- The earthing pins ensure that earth connection is made first and broken last, being longer than conducting pins
- The visible earth terminals facilitate easy checking of earth connection
- The cable grip to the plug is made very strong by providing a compression gland and by protecting it at the point of entry by a strong rubber guard

**Applications**

Industrial, Commercial & Domestic portable equipments like Hand/Power Tools, Industrial Ovens, Welding Sets, Mobile Generators, Furnaces, Ships, Office Machines, Refrigerators, Coolers, Air-Conditioners, Overhead Cranes, Chilling Cabinets, Tile Polishers and Sewing Machines

# Reliable insulation monitoring for critical hospital environments

## PowerLogic™ Vigilohm for hospitals

Ensuring uninterrupted power in medical facilities is critical for patient safety, especially in operating theatres and ICUs where equipment is connected to the patient's body. The IEC60364-7-710 standard mandates the use of IT earthing systems in these environments to minimize downtime and maintain continuous power. With over 50 years of experience, Schneider Electric offers insulation monitoring solutions that meet these standards and are easy to implement.

PowerLogic™ Vigilohm is purpose-built for hospital settings, enhancing electrical reliability and supporting maintenance teams. Its insulation monitoring devices (IMDs) provide real-time insights into insulation resistance, transformer performance, and fault locations—locally or remotely. Scalable from a single room to a full healthcare campus, Vigilohm equips staff with the critical data needed to respond quickly, ensure compliance, and protect patient care.

In IT earthing systems, the first fault does not interrupt power. Vigilohm enables fault detection and resolution before it escalates.

### Benefits

- **Install with ease** - no wiring required between monitoring and fault location devices
- **Enhance patient safety** with continuous monitoring of insulation resistance and transformer health
- **Accelerate fault response** by instantly identifying faulty feeders via fault locators
- **Ensure full IEC compliance** for healthcare environments
- **Reduce maintenance time and cost** by proper scheduling through remote supervision and preventive alarming
- **Simplify deployment** with intuitive interfaces, Modbus communication, and flexible installation
- **Support critical care uptime** with robust, hospital-proven devices trusted worldwide
